with Select Joint Tape

Reduces Wall Panel
Patching Costs!

SELECT JOINT TAPE

A TEMPORARY JOINT COVER FOR TILT-UP APPLICATIONS

Select Joint Tape eliminates or greatly reduces *rubbing* and *patching* of the tilt wall panel surfaces

Select Joint Tape is a UV-resistant polyethylene tape to be used as a temporary cover for saw-cut joints on tilt-up casting slabs designed to prevent concrete and debris intrusion and reduce wall panel patching costs.

Select Joint Tape adheres well to properly prepared green concrete and leaves no residue on the casting slab when removed. May be applied either prior to or following application of Nox-Crete's Silcoseal water-based bondbreakers.

Key Advantages Compared to Traditional Methods:

- Practically eliminates wall panel patching costs
- Forms a tight seal to prevent concrete, dust and debris from entering saw-cut joint
- Compatible with water-based versions of Silcoseal Bondbreakers
- Leaves no adhesive residue on casting slab
- Resistant to UV degradation for up to 28 days
- Waterproof

Packaging:

- 24 rolls/case
