MonoFilm™

SURFACE BLEED WATER EVAPORATION REDUCER

Extends finishing time in Hot and/or windy conditions

EXTENDS
WORKING TIME

MINIMIZES
PLASTIC
SHRINKAGE

REDUCES
MOISTURE
LOSS

CREATES A
PROTECTIVE
FILM

BENEFITS

- Reduces surface bleed water evaporation.
- Allows for more finishing time in hot, dry and windy conditions.
- Creates a monomolecular layer that reduces surface moisture evaporation up to 80% in wind and 40% in sunlight.
- Contains a highly visible fluorescent dye for easy, uniform application.
- MonoFilm's protective layer lasts as long as the concrete remains plastic, allowing sufficient working time to achieve an acceptable finish.
- Does not interfere with the normal cement hydration process or subsequent application of floor sealers, paints, coatings or patching materials.
- Compatible with all Nox-Crete curing, tilt-up, flooring and decorative products.

* Comes in concentrated and ready-to-use formulations
